Camera's en automatische beeldherkenning

The image displays three overlapping screenshots of a Google Images search interface, illustrating how a camera's image can be used for automatic identification of water plants.

Top Screenshot: A search for "woekerende waterplanten" (woody water plants) using the image "waternavel.jpg". The search results show "gewone waternavel" (common water lily) as the best match. The image format is 444 x 326 pixels.

Middle Screenshot: A search for "gewone waternavel" using the image "waternavel.jpg". The search results show "woekerende waterplanten" as the best match. The image format is 536 x 337 pixels.

Bottom Screenshot: A search for "woekerende waterplanten" using the image "waternavel.jpg". The search results show "gewone waternavel" as the best match. The image format is 536 x 337 pixels.
